PERSONAL PROJECTS

Development of Crop Prediction Technique using machine learning for better Production (12/2022 - 04/2023)

- This is an ML based project that uses different algorithms to predict crops according to relevant factors like soil, rainfall etc.
- Development of UI interface of the website using mainly HTML,CSS,Javascript

knowMe (05/2022 - 05/2022)

- knowMe is the name of our project it was a team project in this project we have created a website which is a Resume Showcase system. My role in this project was to design the web page using HTML5, CSS and JavaScript along with using BootStrap. Later after completion of designing and logic of our site we hosted it on AWS server using EC2 tool.

Hotel Management System (11/2021 - 12/2021)

- This was a Java based Hotel Management System App made using Java NetBeans IDE designed using swing controls and later integrated with MySQL Database for the data storage and usage.
